

We get IT right!

USA – South Africa – UK

SPECIAL OFFER! 24 hour server monitoring

Businesses rely on their servers. To have such a vital part of your IT system fail could be catastrophic – you have to find a replacement server quickly, then wait patiently whilst data is restored – and that’s all assuming the backups are working properly!

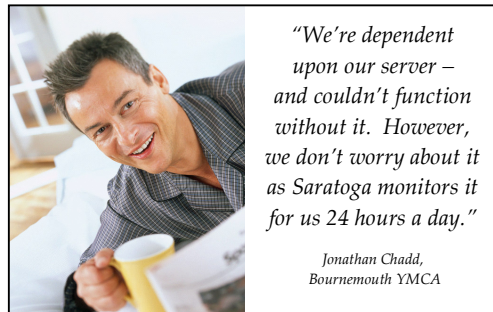

But what if you could know that your systems were monitored, 24 hours a day, and any impending problems were reported well in advance of any failures, giving you plenty of time to deal with them before they cost you time and money? And what if you could be sure that your backups were successful every night?

That’s where Saratoga’s server monitoring system comes in. From a single server to a room full of them, we can tailor a package that’s right for your business. If all’s working well, you’ll be secure in the knowledge that we’re keeping an eye on the system for you; if anything’s looking worrying, we’ll be in touch before you’ve even noticed the issue.

And now, we’re offering a special deal on single server monitoring – for October only, we’ll monitor a server for as little as £50 per month.

This special price will be valid for a server monitoring contract* signed during October 2007. So don’t waste any time – fax back the form below or give us a ring to discuss how we can help you keep your systems running!

*Contracts are for a minimum of 12 months
